## Better ESD protective packaging for CU10

Sonion is pleased to announce that we are introducing a new and better ESD protective packaging for our Combination Unit (CU10) as well as Service Units with mounted ESD sensitive components in order to better protect our components.

**The improvement of packaging can easily be identified in the color (changing from white to black) as well as a specific text on the new ESD protective packaging.**

The packaging has been qualified according to our internal Sonion Qualification Procedures, and will be introduced from week 42, 2006. This new packaging will become the future standard and have no influence on your current orders or on the part numbers that you order today.

Please do not hesitate to contact us, should you have any questions or need further information regarding the above. You may also contact your local Sales Representative for electromechanical components or [sonion.cqs@sonion.com](mailto:sonion.cqs@sonion.com)
